

As a leader in the dairy industry, Pennfield Feeds is pleased to provide Rumensin®, the newest innovation in milk cow nutrition, to interested dairy customers. This additive may benefit your operation in several ways. Pennfield recommends that **ALL** ration changes be made gradually, so we are providing two new bagged products containing Rumensin® for you to try. Please discuss your needs with your Pennfield Dairy Specialist. Here are some important details to understand when considering Rumensin® from Pennfield Dairy Technologies for your herd.

- ⇒ **Dosage is critical to be successful. Your Pennfield Dairy Specialist can help you feed the right amount.**
- ⇒ **RUMENSIN® CAN BE FATAL TO HORSES AND RABBITS IF INGESTED AT VERY LOW DOSES. Please follow all label recommendations and warnings when using Rumensin®. The Pennfield Rumensin® Mixer 4.8 Gram/lb product and the Pennfield Rumensin® Topdress 0.8 Gram/lb. product will be colored red for on farm safety reasons.**
- ⇒ **Feed intake may be lower for cows fed Rumensin®. This is dosage sensitive so please consult your Pennfield Dairy Specialist about this effect.**
- ⇒ **Milk fat percentage may be reduced slightly depending on the amount of Rumensin® fed.**
- ⇒ **Increased incidence of cystic ovaries, metritis, services per animal and days open can occur with cows being fed Rumensin®. A comprehensive nutritional, reproductive, and herd health program should be in place to minimize these effects. You can rely on your Pennfield Dairy Specialist to help you coordinate this with your veterinarian.**

**For best results with Rumensin® call your Pennfield Dairy Specialist or contact us at 1-800-995-0333**
